DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kazarinov et al (U.S. Patent 6,289,151 B1), and further in view of Boyne et al (U.S. Patent 6,385,353 B1).

Kazarinov et al disclose all-pass optical filters (continuously variable optical delay line) comprising ring resonators to reduce the dispersion in an optical communication system by creating delays (see column 3 lines 8-27). However, Kazarinov et al do not teach an incremental variable optical delay line. Boyne et al teach optical delay lines having different path regions of parallel paths and curved paths (see Fig. 3). Since

Kazarinov et al further teach coupling the continuously variable optical delay line to different optical devices such as a MZI (optical delay line) having path lengths that are different (see column 9 lines 10-25) and using a plurality of optical paths are known in the art, applying Boyne et al's incremental variable optical delay device in Kazarinov et al would have been obvious to one having ordinary skill in the art to obtain desired delays in an optical system that requires a plurality of paths.

Conclusion

4. The prior art documents submitted by applicant have been considered and made of record (note the attached copy of form PTO-1449).
